

# Riverside Field

## Foyers

Landscape Proposals: August 2023

Birch & bulbs

Bird Cherry

Wood Anemone

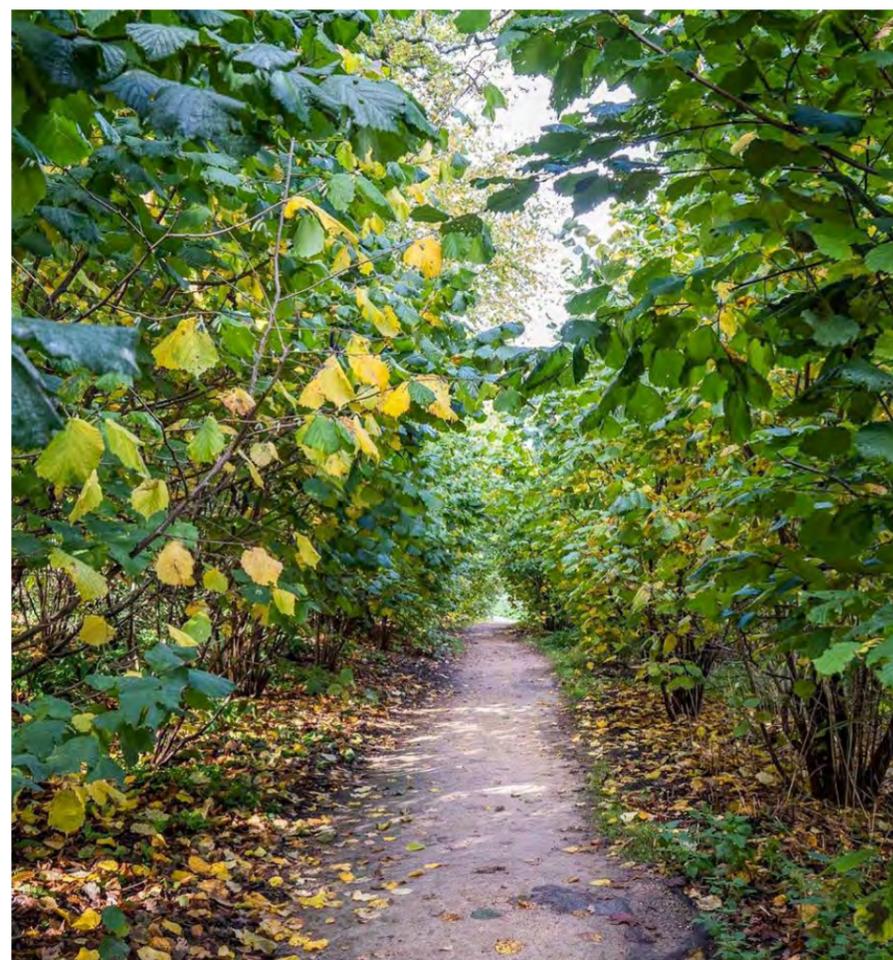

Crab Apple

Wild Garlic

Hazel & Primulas

Coppicing keeps canopy open and paths accessible

Field Maple

Bands of woodland create routes and habitat for nature as well as natural screening in and out of the site. Combined with a wildflower seeding strategy, these newly established woodlands can become diverse and beautiful environments through which paths can be established. Trees providing spring flowering, autumn colour will be considered.

Orchard meadow. A wide variety of heritage fruits can be grown.

Perennial Herbs

Shelter structure for seating

Polycrubb for year-round community growing.

The production of food, herbs and medicinal plants would be provided for in the NE of the site within an enclosed garden accessible for all the community. This would be adjacent to an orchard and nuttury providing ample oppournity for people of all ages to get involved.

Perennial vegetables

Medicinal Plants

Low maintenance paths

Plants for Pollinators

Nut Trees & Shrubs

Raised Beds

# Open Grassland

Maintain wildflower sward with mown/desire lines.

Larger specimen trees along paths.

An area to the west of the site will be kept as open grassland, for walking and recreational use. Some tree planting around paths defines the space and enhance the benefit for biodiversity.

Tree guards

Cycle store with green roof

Permeable surfacing

Durable & permeable paths

All year interest planting

A range of native trees and shrubs will screen and soften the car park and wider landscape around the building and sports provision. Natural and permeable materials and surfaces such as resin bound gravel and timber will be used where possible. The bleacher seating would incorporate planting.

Timber Bleacher seating
